Introduction

The Safari Zoo Management System is a web-based application developed to automate and manage zoo operations digitally. The system replaces traditional manual processes with an integrated online platform.

The application provides multiple panels:

- Admin Panel
- User (Visitor) Panel
- Employee Panel
- Medical Assistant Panel

The system allows visitors to book tickets online, explore animal details, purchase zoo merchandise, donate for animal welfare, and apply for jobs. The admin manages animals, events, users, donations, employees, and reports. Medical assistants maintain animal health records.

The system is developed using:

- PHP (server-side scripting language)
- MySQL (database management system)
- HTML, CSS, JavaScript, Bootstrap
- XAMPP Server

The system is developed using Java Servlets, JSP for frontend, JDBC for database connectivity, and MySQL for storage. This makes it a lightweight but scalable platform, ideal for both learning and real deployment.

Problem Definition

Traditional zoo management systems face several issues:

- Manual ticket booking system
- Paper-based animal medical records
- No centralized database
- Difficulty in managing merchandise and donations
- Lack of real-time reporting
- Poor visitor engagement

There is a need for a centralized, secure, automated, and user-friendly web-based system that improves zoo operations and enhances visitor experience.

Existing System

The existing system is mostly manual or semi-digital.
Problems in Existing System:

- Manual data entry
- Risk of data loss
- Slow record retrieval
- No integrated payment system
- No structured medical tracking for animals
- No centralized admin control

Functional Requirement

Functional requirements describe what the system should do.
Admin Module

- Login authentication
- Manage animals (Add, Update, Delete)
- Manage users
- Manage employees & medical assistants
- Manage merchandise products
- View ticket reports
- Manage events
- Manage donations
- View feedback and contact messages

User Module

- Register & Login
- Book tickets online
- Online payment

- View animal details & gallery
- Purchase merchandise
- Donate to zoo
- Apply for jobs
- Submit feedback

Employee Module

- Login
- Book tickets for visitors
- View ticket details

Medical Assistant Module

- Login
- Record animal checkup
- View animal medical history

Non-Functional Requirement

- **Performance:** Fast response time
- **Security:** Secure login & protected database
- **Usability:** User-friendly interface
- **Reliability:** Continuous system availability
- **Scalability:** Support future enhancements
- **Maintainability:** Easy to update and manage

System Requirement

System Requirements

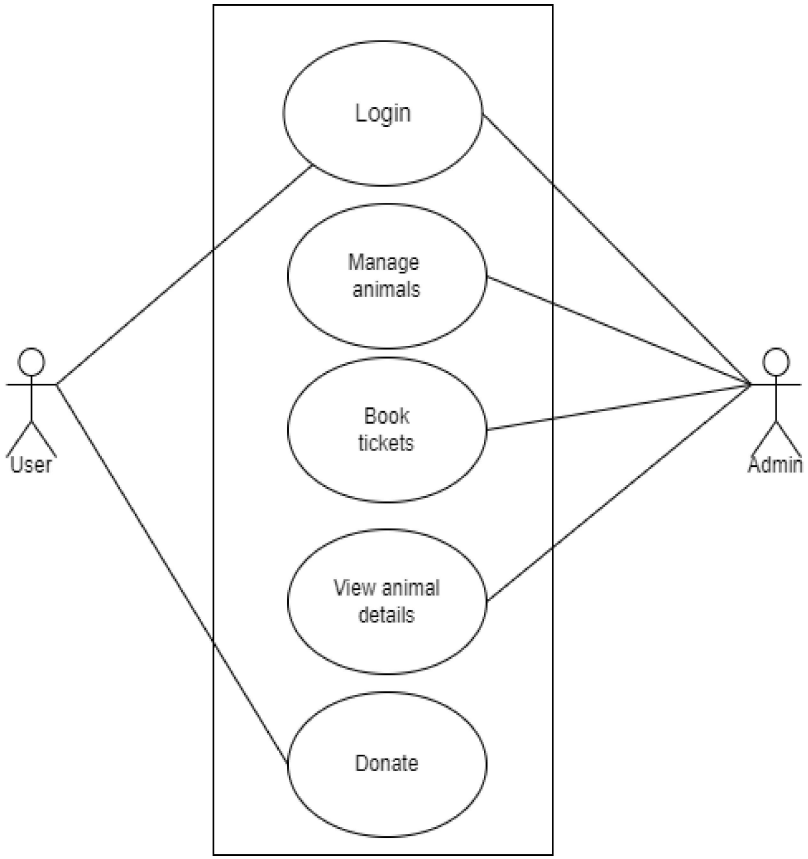
Hardware

- Processor: Intel i3/i5 or higher
- RAM: 4 GB minimum
- Hard Disk: 1 GB free space

Software

- Operating System: Windows 10 Pro
- Front-End: HTML, CSS, JavaScript, Bootstrap
- Back-End: PHP
- Database: MySQL
- Server: XAMPP
- Tools: VS Code

Usecase



Login
Manage animals
Book tickets
View animal details
Donate

Data Dictionary:

1)USER:

field	Type	Description
Id	int	User id
fname	varchar	First name
lname	varchar	Last name
email	varchar	User email
pass	varchar	password
phno	int	User phone No
city	varchar	User city

2)ADMIN:

field	Type	Description
Id	int	Admin id
name	varchar	Admin name
dob	date	Last name
email	varchar	Admin email
pass	varchar	password
phno	int	Admin phone No
add	varchar	Admin address

3)ANIMAL:

field	Type	Description
Id	int	Animal id
name	varchar	Animal name
conservation_status	varchar	status
Life_spam	varchar	Life span
Body_size	varchar	Body size
Native_habitat	varchar	Habitat
diet	varchar	Animal diet
desc	varchar	Animal description
type	varchar	Animal type

4)TICKETS:

field	Type	Description
Id	int	Tickets id
name	varchar	User name
email	varchar	User mail
child	int	No of child
adults	int	No of adults
senior	varchar	No of senior
Total_amt	varchar	Total amount
date	date	Ticket’s date
